August 21, 2024

Good afternoon,

Servpro of Franklin, Vance and Granville Counties went to the home of Ms. Sallie Whitehead on 8/16/2024 to monitor the crawlspace humidity and to check for further water intrusion after the rains from Hurricane Debbie. The crawlspace was reading a consistent 50-55 percent humidity front to back. The vapor barrier now fully covers the ground throughout, properly.

On 8/6 Servpro removed a second layer of vapor barrier from the majority of the crawlspace. We then removed a section of torn vapor barrier and a section of folded over plastic and replaced it with the same 10 mil white plastic, taped at the seams. We also pulled out a few root like plants growing around the uncovered area of the crawlspace by the access door. This area also showed signs of microbial growth. An anti-microbial was applied to this area and was followed up with a stain remover. There was also a couple bays with missing insulation towards the middle of the house that was corrected with new insulation. We also inspected the inside of the home and fastened down a loose countertop and tightened the faucet on the sink in the kitchen.

X 

Damion Conley
SERVPRO FVG Production Manager
