Affected areas:

- Crawlspace

CARE

CARE Services logo.

Cause of loss:

- Drain line burst.

Methods used to determine damage:

- Moisture probes (penetrating and non-penetrating)

Recommendations:

- Remove excess moisture in the structure by utilizing air movement and dehumidification following the IICRC S500 standards of care. The drying process should take 3-5 days to complete.
- Written daily monitoring of the drying process.

Following is our estimate to perform mitigation services for the water loss that occurred at your property. This estimate is based on a visual inspection aided by moisture readings and is not a final invoice. Please also note that this estimate is for mitigation ONLY and does NOT include any repairs that may be needed. Once work begins and we know the extent of the damage, we will be happy to provide you with an updated repair estimate. If you have any questions or concerns please feel free to contact me via email or by phone. It is a guide for the scope of work that needs to be performed. Additionally, if we find that any portion of the work will exceed this estimate we will communicate with you immediately before proceeding/continuing. Upon completion of mitigation services a final invoice will be submitted based on the actual work performed.

Thank you for the opportunity to quote your work, should you have any questions please do not hesitate to call me.
