Restore water to home after winterization

Restore water to the home after winterization. Verified meter was able to turn on. Conducted a review of all connections in bathrooms, laundry, kitchen, water heater, and outside faucets. Upstairs bathroom sink was disconnected from the water lines, reconnected before turning on water. Turned on the water meter to test for leaks. Dishwasher leak discovered, turned off water line under the kitchen sink to stop. Front left sill faucet leak found in crawlspace, with approval to cap the line, the line was capped and tested.

Per Jill Pike- water was turned on to the home and turned the waterlines off at the toilets, bathrooms sinks upstairs and downstairs, wash machine, and dishwasher. The kitchen sink water is on.
