IMPORTANT INFORMATION ON PROPANE SAFETY

WARNING STATEMENT: Propane is an extremely flammable gas. Propane vapor reduces oxygen available for breathing and may cause suffocation in confined spaces. Propane liquid may cause freeze burn similar to frostbite. Propane can contain small quantities of chemicals known to cause cancer or birth defects.

FOR YOUR SAFETY, PROPANE HAS AN ODOR ADDED SO YOU CAN DETECT LEAKS...You and each member of your family must know the smell of propane. Ask your service or delivery person to demonstrate its odor. If anyone in your household cannot smell propane, or it smells weak, call us immediately. Propane is heavier than air and will collect at floor level. Carefully smell at floor level and in low spots to check for propane.

WHAT TO DO IF YOU SMELL GAS OR SUSPECT A LEAK:

1. Put out all smoking materials and any other open flames.
- 2.Do Not operate any appliances, switches or thermostats
- 3.Get everyone outside and away from gas equipment.
- 4.Shut off the gas supply, using the shut-off valve at the tank or cylinder. (turn clockwise)
- 5.Call your propane supplier-use your neighbor's phone-if gas smell is in the house.
- 6.Stay outside and leave the gas off until the leak has been found and fixed.

RELIGHT YOUR PILOTS

We recommend that for safety reasons, you should have a qualified technician to relight your pilot if you are not comfortable doing so. If you choose to relight the pilots yourself:

- a. Turn off all gas appliances and manually shut off the gas supply at the tank shut-off valve
- b. Wait 15 minutes for the gas to dissipate
- c. CAREFULLY smell for the presence of propane at floor level and low spots before attempting to relight the pilot
- d. If gas is detected-STOP-See "WHAT TO DO IF YOU SMELL GAS" above.
- e. Follow the manufacturer's instructions for pilot lighting
