

The digital Flood Insurance Rate Map (FIRM) was produced through a unique cooperative partnership between the State of North Carolina and the Federal Emergency Management Agency (FEMA). The State of North Carolina has committed a long-term agreement to maintain management to decrease the costs associated with flooding. This is demonstrated by the State's commitment to map flood hazard areas of the local level. As a part of the effort, the State of North Carolina has joined in a Cooperative Technical State agreement with FEMA to produce and maintain the digital FIRM.

FLOOD HAZARD INFORMATION

SEE FIS REPORT FOR ZONE DESCRIPTIONS AND INDEX MAP FOR FIRM PANEL LAYOUT
THE INFORMATION DEPICTED ON THIS MAP AND SUPPORTING DOCUMENTATION ARE ALSO AVAILABLE IN DIGITAL FORMAT AT [HTTPS://FRIS.NC.GOV/FRIS](https://fris.nc.gov/fris)
[HTTPS://MSC.FEMA.GOV](https://msc.fema.gov)

NOTES TO USERS

For information and questions about this map, available products, associated with this FIRM including historic versions of the FIRM, please visit the National Flood Insurance Program website at <https://fris.nc.gov/fris> or visit the FEMA Map Service Center website at <https://msc.fema.gov>. An accompanying Flood Insurance Study report, Letter of Map Revision (LOR), or Letter of Map Amendment (LOMA) is available for this panel and digital versions of the FIRM are available. Visit the North Carolina Floodplain Mapping Program website at <https://fris.nc.gov/fris> or contact the FEMA Map Service Center.

Communities planning and/or adjacent FIRM panels must obtain a current copy of the adjacent panel as well as the current FIRM index. These may be obtained directly from the Map Service Center or the number listed above.

For community and countywide map data refer to the Flood Insurance Study report for this jurisdiction.

To determine if flood insurance is available in the community, contact your insurance agent or call the National Flood Insurance Program at 1-800-455-6201.

Flood Insurance Study (FIS) means an examination, evaluation, and determination of flood hazards, corresponding water surface elevations, flood hazard risk zones, and other flood data in a community issued by the North Carolina Floodplain Mapping Program (NCFMP). The Flood Insurance Study (FIS) is comprised of the following products used together: the Digital Flood Hazard Database, the Water Surface Elevation Features, the digitally derived, augmented Flood Insurance Rate Map and the Flood Insurance Survey Report. A Flood Insurance Survey is a compilation and presentation of flood risk data for specific watercourses, lakes, and coastal flood hazard areas within a community. This report contains detailed flood elevation data, data tables and FIRM indices. When a Flood Study is completed for the NCFMP, the digital information, reports and maps are assembled into an FIS. Information shown on this FIRM is provided in digital format by the NCFMP. Base map information shown on the FIRM was provided in digital format by the NCFMP. The source of this information can be determined from the metadata available in the Digital Flood Hazard Database and in the Technical Support Data Notebook (TSND).

ACCREDITED LEVEE NOTES TO USERS: If an accredited levee now appears on this panel check with your local community to obtain more information, such as the estimated level of protection provided (leak) may exceed the 1-percent annual-chance level and Emergency Action Plan, on the levee system(s) shown as providing protection for areas on this panel. To mitigate flood risk in coastal risk areas, property owners and residents are encouraged to consider flood insurance and floodproofing or other protective measures. For more information on flood insurance, interested parties should visit the FEMA website at <https://www.fema.gov/national-flood-insurance-program>.

PROVISIONALLY ACCREDITED LEVEE NOTES TO USERS: If a Provisionally Accredited Levee (PAL) now appears on this panel, check with your local community to obtain more information, such as the estimated level of protection provided (leak) may exceed the 1-percent annual-chance level and Emergency Action Plan, on the levee system(s) shown as providing protection for areas on this panel. To maintain accreditation, the levee owner or community is required to submit the data and documentation necessary to comply with Section 6.12 of the NFIP regulations. If the community or owner does not provide the necessary data and documentation or if the data and documentation provided indicates the levee system does not comply with Section 6.12 requirements, FEMA will remove the levee from the FIS and the information in the FIS will be used to determine flood risk in coastal risk areas, property owners and residents are encouraged to consider flood insurance and floodproofing or other protective measures. For more information on flood insurance, interested parties should visit the FEMA website at <https://www.fema.gov/national-flood-insurance-program>.

LIMIT OF MODERATE WAVE ACTION NOTES TO USERS: For some coastal flooding zones the AE Zone boundary has been lowered by a Limit of Moderate Wave Action (LMWA). This LMWA represents the approximate seaward limit of the 1-foot limiting wave. The effects of wave heights between the VE Zone and the LMWA, in between the shoreline and the LMWA for areas where VE Zones are not identified, will be similar to, but less severe than those in the VE Zone.

Limit of Moderate Wave Action (LMWA)
